

Use Case: Start a game

Step	User's Action	System's Response
1	Launches the application	
2		Displays a dialogue window asking the user to choose a board style
3	Chooses a style (WoodStyle or MetalStyle)	
4		Displays a dialogue window asking the user to choose how many stones per pit to start with
5	Chooses a number (3 or 4)	
6		The game board is initialized with the chosen board style and number of starting stones per pit.

Variation #1: Exit style selection

- 1.1 Start at Step 2
- 1.2 Selects X to close the style selection window
- 1.3 Application terminates

Variation #2: Return style selection screen

- 2.1 Start at Step 4
- 2.2 Selects X to close the starting stones per pit selection window
- 2.3 Continue with Step 2, displaying the style selection window again

Use Case: Make a Move

Step	User's Action	System's Response
1	Clicks a highlighted pit	
2		Distributes stones in the pit counter-clockwise, one at a time. Only the opposing player's store will be skipped. If the last stone lands in an empty pit, that stone and the stones in the opposite pit move to current player's store.
3		The confirm move and undo functions are enabled.

Variation #1: Free turn

1.1 Start at Step 2

1.2 The last stone lands in the current player's own store. The player gains an extra free move

1.3 The undo function is enabled (can undo if dislike previous move that gave them a free turn)

1.4 Continue with Step 1

Use Case: Confirm Move

Step	User's Action	System's Response
1	Complete Make a Move	
2	Clicks the "Confirm Move" button to confirm move	
3		The current player's turn ends and the next player's turn begins. The highlight switches to the next player's pits. The player's undo count is reset.

Use Case: Undo Move

Step	User's Action	System's Response
1	Complete Make a Move	
2	Clicks "Undo" button to undo move	
3		Moved stones from the last play return to their original pit. Adds 1 to undo count. If count becomes 3, disable undo.
4		Continue with Step 1

Variation #1: Undo limit reached

1.1 Complete Step 1 (full Make a Move use case completion).

In this scenario, the user has already used three undos.

1.2 Move is automatically confirmed by the system because the player is out of undos
(Step 3 of Confirm Move use case is carried out by the system)

Use Case: Rage Quit

Step	User's Action	System's Response
1	Presses X on the window frame at any time	
2		Game terminates

End Game

Step	User's Action	System's Response
1	Complete Make a Move	
2		No more stones remain in at least one side of the pits. Any remaining stones on the other side are swept to the respective player's store.
3	Clicks the "Confirm Move" button to confirm move	
4		A dialog window displays the winner.
5	Chooses OK or X	
6		Game app terminates

Variation #1:

1.1 Start at Step 2

1.2 Carry out undo turn

1.3 Continue with Step 1
